

# Blok Frontend Developer Task

Exciting to get acquainted with your frontend developer skills! We are interested to see your technical frontend developer skills as well as your visual talent.

Write clean and well structured code. Writing tests or using version control is not required.

If you have any questions, please feel free to ask. :)

## Task Description

You are provided material along with the task in a zip file `front-dev-task.zip`. In the archive, there is a file called `layouts.pdf` including 3 mobile views of a valuator user interface. Implement the views and focus on selection interactions and transitions between views.

In addition to the mobile views, implement also your interpretation of the desktop views according to the styling of the mobile views.

In the zip file, there is also `assets` directory including background image, fonts, icons and the logo.

## Technologies

Preferably, use React for the implementation, but you are free to choose the stack as far as it's a SPA. Also, you can structure the project the way you want.
